

**In the Claims**

Please replace all prior versions, and listings, of claims in the application with the following list of claims:

Please cancel claims 7 and 9 without prejudice or disclaimer.

1. (Canceled)
2. (Currently Amended) The insert of claim 3, wherein the raised portion includes a bullseye configuration, having at least two concentric circles.
3. (Previously Presented) An insert for placement in a door light, the insert comprising:  
a substantially planar top surface defining a plane; and  
a raised portion at least partially surrounded by the planar surface, the raised portion including at least two features extending above the plane of the planar top surface, the raised portion having a substantially uniform configuration;  
wherein the raised portion includes at least two raised concentric rings substantially centered on the insert.
4. (Previously Presented) An insert for placement in a door light, the insert comprising:  
a substantially planar top surface defining a plane;  
a raised portion at least partially surrounded by the planar surface, the raised portion including at least two features extending above the plane of the planar top surface, the raised portion having a substantially uniform configuration, wherein the raised portion includes at least two raised concentric rings;  
an outer edge of the raised portion; and  
at least one truncated side provided on a portion of the outer edge and interrupting at least an outermost concentric ring,  
wherein the truncated side is substantially perpendicular to the planar top surface.

5. (Original) The insert of claim 4, further comprising:  
two truncated sides provided on opposite portions of the outer edge of the raised portion and substantially parallel to one another.

6. (Previously Presented) The insert of claim 3, wherein the planar top surface of the insert has a thickness, the raised portion has a maximum height, and the maximum height is at least one-quarter the thickness.

7. (Canceled)

8. (Previously Presented) The insert of claim 3, further comprising:  
a substantially planar bottom surface opposite the top surface, the planar bottom surface defining a second plane; and  
a convex portion at least partially surrounded by the planar bottom surface, the convex portion provided recessed above the second plane of the bottom surface, the convex portion having a substantially uniform configuration,  
wherein the substantially uniform configuration of the convex portion corresponds to the substantially uniform configuration of the raised portion.

9. (Canceled)

10. (Original) The insert of claim 9, wherein the plastic material is selected from the group consisting of acrylic, polycarbonate, polyethylene terephthalate, polystyrene PS, and unplasticized polyvinyl chloride.

11. (Previously Presented) The insert of claim 3, further comprising:  
a frame having at least a part of the frame abutting an outer edge of the insert to center the insert within the frame,  
wherein the frame forms a central opening for exposing the raised portion of the insert.

12. (Canceled)

13. (Currently Amended) The door light of claim 15, wherein the projecting portion includes a bullseye pattern, having at least two concentric circles.

14. (Canceled)

15 (Previously Presented) A door light comprising:  
an insert having a substantially planar top surface defining a plane, wherein the insert is substantially impact resistant and wherein the insert is molded; and  
a projecting portion including at least two features extending above the plane of the planar top surface, the top planar surface at least partially surrounding the projecting portion, the projecting portion having a substantially uniform configuration, wherein the projecting portion includes at least two raised concentric rings;  
an outer edge of the projecting portion; and  
at least one truncated side provided on a portion of the outer edge and interrupting at least an outermost concentric ring,  
wherein the truncated side is substantially perpendicular to the planar top surface.

16. (Original) The door light of claim 15, further comprising:  
two truncated sides provided on opposite portions of the outer edge of the projecting portion and substantially parallel to one another.

17. (Previously Presented) The door light of claim 15, wherein the planar top surface of the insert has a thickness, the projecting portion has a maximum height, and the maximum height is at least one-quarter the thickness.

18. (Previously Presented) The door light of claim 15, wherein the projecting portion has a plurality of peaks, wherein a maximum height of the peaks is substantially centered on the projecting portion, a height of the peaks of the projecting portion decreasing at a constant rate in a radial direction from the maximum height toward an outer edge of the projecting portion.

19. (Previously Presented) The door light of claim 15, further comprising:  
a substantially planar bottom surface opposite the planar top surface, the planar bottom surface defining a second plane; and  
a convex portion provided at least partially surrounded by the planar bottom surface, the convex portion recessed above the second plane of the bottom surface, the convex portion having a substantially uniform configuration,  
wherein the substantially uniform configuration of the convex portion corresponds to the substantially uniform configuration of the raised portion.

20. (Previously Presented) The door light of claim 15, wherein the insert is formed of a material selected from the group consisting of acrylic, polycarbonate, polyethylene terephthalate, polystyrene PS, and unplasticized polyvinyl chloride.

21. (Canceled)

22. (Previously Presented) The insert of claim 3, wherein the at least two raised concentric rings include an inner ring and an outer ring, wherein the maximum height of the inner ring is greater than the maximum height of the outer ring.

23. (Previously Presented) The insert of claim 3, wherein the at least two raised concentric rings include an inner ring and an outer ring, wherein the maximum height of the inner ring is substantially equal to the maximum height of the outer ring.

24. (Previously Presented) The insert of claim 3, wherein at least one of the concentric rings is a complete, uninterrupted ring.

25. (Previously Presented) An insert for placement in a door light, the insert comprising:  
a substantially planar top surface defining a plane; and

a raised portion at least partially surrounded by the planar top surface, the raised portion including at least two features extending above the plane of the planar top surface, the raised portion having a substantially uniform configuration;

wherein the raised portion includes at least two raised concentric rings, defining an inner ring and an outer ring, wherein the maximum height of the inner ring is greater than the maximum height of the outer ring.

26. (Previously Presented) The insert of claim 4, wherein the insert is formed of a substantially shatterproof material.

27. (New) In combination:

a door;

a translucent insert for placement in the door, the insert comprising a substantially planar top surface defining a plane, and a raised portion at least partially surrounded by the planar surface, the raised portion including at least two features extending above the plane of the planar top surface, the raised portion having a substantially uniform configuration, and wherein the raised portion includes at least two raised concentric rings substantially centered on the insert.

28. (New) The combination of claim 27, wherein the raised portion includes a bullseye configuration, having at least two concentric circles.

29. (New) The combination of claim 27, wherein the insert is formed of a plastic material.

30. (New) The combination of claim 27, wherein the at least two raised concentric rings include an inner ring and an outer ring, wherein the maximum height of the inner ring is greater than the maximum height of the outer ring.

31. (New) The combination of claim 27, wherein at least one of the concentric rings is a complete, uninterrupted ring.

32. (New) The combination of claim 27, further comprising an outer edge of the raised portion; and

at least one truncated side provided on a portion of the outer edge and interrupting at least an outermost concentric ring,

wherein the truncated side is substantially perpendicular to the planar top surface.

33. (New) The insert of claim 3, wherein the raised portion has a plurality of peaks, wherein a maximum height of the peaks is substantially centered on the raised portion, a height of the peaks of the raised portion decreasing at a constant rate in a radial direction from the maximum height toward an outer edge of the raised portion.
